Climate change carries significant risks for populations, economies, and financial systems in the Middle East and North Africa. This webinar, a part of METAC’s Economics of Climate Change series, explores the dual impact of a warming climate and climate change mitigation policies on financial markets and institutions. It will outline strategies financial regulators can employ to manage climate-related risks and discuss the financial system’s role in combating climate change, including the relationship between climate risks and finance. The session will conclude with Q&A.

Time – 2:00 p.m. – 2:45 p.m., Beirut time (See time in your city HERE)

Language – English with simultaneous interpretation to Arabic and French.

This webinar is intended for officials and government agencies tasked with the design and execution of policies related to macroeconomics and climate change issues as well as NGOs and civil society organizations dealing with climate topics.
