Climate Change and the Financial System
17 April 2024

As part of its event series on the Economics of Climate Change, METAC presented a webinar exploring the dual impact of a warming climate and climate change mitigation policies on financial markets and institutions. The webinar outlined strategies that financial regulators can employ to manage climate-related risks and discussed the financial system’s role in combating climate change, including the relationship between climate risks and finance.

The webinar was attended by more than 100 participants who engaged in a lively discussion with the speaker during the Q&A session. Questions covered various topics, including how financial institution can integrate climate change into lending decisions; if environmental provisions for potential losses can mitigate risks; and what role green bonds play in financing climate resilience and achieving NDCs.
