The ability to respond to natural disasters or weather-related losses is crucial for the climate risk management of governments, societies, and corporations. This webinar is part of METAC’s event series on the Economics of Climate Change and presents how reinsurance company Munich Re is analyzing climate risks and assessing their financial implications. It will present how insurance solutions can mitigate damages from climate-related shocks and cover risks that have traditionally been uninsurable. A discussant from the IMF will illustrate the structure of the insurance market in the MENA region and discuss its role to speed economic recovery from climate-related disasters. The presentation and discussion will be followed a Q&A session.

**Time** – 2:45 p.m. – 3:45 p.m., Beirut time (See time in your city [HERE](#)).

**Language** – English with simultaneous interpretation to Arabic and French.

This webinar is intended for officials and government agencies tasked with the design and execution of policies related to climate change issues as well as NGOs and civil society organizations dealing with climate topics.

Should you encounter any difficulties connecting to the webinar, please contact Ms. Zeinab Hammoud at (zhammoud@imf.org).

Please send any specific questions on the event to Ms. Anastasia Janzer-Araj (ajanzeraraji@imf.org).
