Climate Responsive Public Investment Management

May 18-22, 2025| Kuwait

How can climate-responsive public investment management help governments better plan, allocate and implement climate-related investment? What are the specific measures undertaken by the GCC countries to strengthen climate resilience, improve governance, and attract sustainable financing?

METAC's regional workshop organized jointly with the IMF Center for Economics and Finance (CEF) in Kuwait introduced climate considerations into the public investment management (PIM) process, with reference to the five institutional components (see chart below) of the [Climate-Public Investment Management Assessment \(C-PIMA\)](#) framework. Mrs. Amra Srdanovic (METAC Regional Public Financial Management Adviser) and Mr. Eduardo Aldunate (IMF Expert) presented the C-PIMA tool developed by the IMF to help countries integrate climate considerations into their PIM systems to improve strategic planning by prioritizing investments that reduce vulnerability to climate risks and enhance the efficiency of public spending. During very active workshop discussions, participants presented the status of climate-responsive PIM practices in their countries and highlighted how the application of C-PIMA supports integration of climate adaptation and mitigation into governments' long-term development plans.

The event brought together 34 participants from 14 countries, including 10 METAC members (Egypt, Djibouti, Iraq, Jordan, Lebanon, Libya, Morocco, Sudan, Tunisia, and West Bank and Gaza), two GCC countries (Oman and Saudi Arabia), as well as Mauritania and Somalia.
